PREFACE

This publication is a summary on the marketing of the 2006 United States Pecan Crop. The information contained in this report was compiled from market reports issued by Federal-State Market News offices operated by the U.S. Department of Agriculture, Agricultural Marketing Service, and the respective State Departments of Agriculture. The following individuals contributed narratives found in this publication: Robert J. Corwin, USDA, Thomasville, GA; Marilyn Mayeux, Louisiana Department of Agriculture, Baton Rouge, LA; Mike Schulte, Oklahoma Department of Agriculture, Oklahoma City, OK; John Stacy, Texas Department of Agriculture, Austin, TX; Steve Skuba, USDA, Phoenix, AZ.

We gratefully acknowledge the information provided by the Foreign Agricultural Service and the Agricultural Statistics Service of the U.S. Department of Agriculture. We also wish to thank the growers, buyers, shellers, and other segments of the pecan industry for their cooperation in supplying information that made these reports possible.

Additional copies of this summary may be obtained at the cost of \$20.00 each on request from:

MARKETING GEORGIA PECANS - 2006 CROP

PRODUCTION: According to the Georgia Agricultural Statistics Service of the United States Department of Agriculture, Georgia's final 2006 pecan production totaled 42 million pounds, measurably below the 2005 total of 80 million pounds. Georgia produced approximately 20.35 percent of the national pecan crop (206.3 million pounds) in 2006. In 2005, Georgia accounted for approximately 28.5 percent of the national production and 24.2 percent in 2004. Prices received by Georgia growers for 2006 pecans averaged \$1.58 per pound compared to \$1.27 per pound in 2005. Value of the 2006 pecan crop totaled approximately \$66.3 million compared to approximately \$101.4 million in 2005.

GROWING CONDITIONS: The crop was expected to be smaller than the 2005 crop due to 2006 being the low year of the alternate bearing cycle. The crop was small but due to favorable growing conditions (a relatively dry, sunny August followed by modest rains in September), the quality of the crop was well above that of recent years.

The initial harvest of 2006 crop pecans began in late September in scattered areas of South Georgia on the Pawnee variety in well-managed orchards on irrigated acreage. Shortly thereafter, the gathering of a few additional early maturing varieties was noted and included Elliot, Seedling, Shoshoni and Stuart. The harvest in Georgia started one to two weeks earlier than last year, which put it close to the norm of most years. The limited harvest that occurred did so primarily in well-managed orchards on irrigated acreage. Harvesting in South Georgia remained very light into third week of the month. Welcome rain at about this point helped aid shuck release in both South and Middle (where significant harvesting had not yet begun) Georgia. During the last week of the month harvesting activities started to pick up in South Georgia and begin in earnest in Middle Georgia. During this period most deliveries from well-managed orchards were of the Desirable variety followed by Cape Fear. Very few Stuarts were harvested to this point. During the last weekend of the month harvest was slowed by rain but dry weather with cool to mild temperatures, which followed, made for a quick resumption to fieldwork. With a short crop, a few lots of blends were already noted as the month drew to a close. Also, accumulation buying points reported only very light amounts of nuts from yard trees, a pattern which would continue for the entire season. In October, due to the above average quality, a higher percentage than normal of offered lots were suitable for giftpack and fundraising uses, but the volume of deliveries remained fairly light. Demand for these lots was very good.

Deliveries by growers were moderate as November began, fueled by favorable weather for fieldwork. More Stuarts were starting to become available but most deliveries continued to be of the Desirable variety. Harvest was slowed by rain on November 7 but resumed the next day. On November 9, trade members reported the harvest in South Georgia between about 35-50% completed and in Middle Georgia about 25-40% completed depending on grower starting date. By this time, Desirables were starting to decline. Machine harvested blends were starting to become more numerous. Stuarts were increasing in volume but still light overall. During the second week of the month, harvesting remained in full swing in both South and Middle Georgia. Trade members reported harvest between about 50-70% completed in South Georgia and about 30-50% completed in Middle Georgia, depending on grower starting date. Rain on Wednesday, November 15, slowed harvest for the next few days but the return of dry weather and cool to cold temperatures saw harvest activities return to normal quicker than anticipated. With a short crop and mostly favorable weather, trade sources on Tuesday, November 21, reported harvest between about 60-80% completed in South Georgia and between about 40-70% completed in Middle Georgia depending on grower starting date. During November, accumulation buying points continued to report only a very light amount of nuts from yard trees. Many Georgia growers took a Thanksgiving break from harvesting on Wednesday, November 22, until Monday, November 27. On Tuesday, November 28, trade sources reported harvest just over 80% completed in South Georgia and about 65% completed in Middle Georgia with some growers there just over 80% completed while some growers who started later only about 50% done. A few growers reported some Stuarts not coming out of the shuck as fast as other orchards of Stuarts and other Improved varieties, thus slowing harvest in these cases. As the month drew to a close, deliveries of Improved varieties were now mostly in the form of machine harvested blends followed by less Desirables and Stuarts. Harvest activities were slowed by rain on Wednesday, November 29 in Middle Georgia but continued in South Georgia in spite of slightly damp conditions from spotty showers. Trade sources reported that the condition of the nuts had begun to be adversely affected by the accumulated rain events combined with recent warm weather, resulting in slightly reduced meat yields.

MARKETING GEORGIA PECANS - 2006 CROP

During the first week of December harvesting was generally active. Mild to cold weather helped prevent any further deterioration of the nuts. On Thursday, December 7, trade sources reported overall harvest in South Georgia between 90-95% completed, while the harvest in Middle Georgia was not as far along. Some larger growers there were 80% to just over 90% completed, while several smaller growers had just begun harvesting, trying to gather all their nuts at one time. By Thursday, December 14, trade sources reported overall harvest in South Georgia over 95% completed with most growers finished for the season. In Middle Georgia, some larger growers there were also finished harvesting, while some smaller growers were still in active harvest with the area over 85% completed. Harvest activities were generally active during the week proceeding Thursday, December 21, with favorable weather conditions allowing more growers to finish harvesting sooner than they had previously anticipated. Trade sources reported overall harvest in South Georgia over 98% completed with most growers now finished. In Middle Georgia the harvest was over 90% completed with most large growers now finished for the season. Very light harvesting continued into January. Condition of the nuts started to show a bit more deterioration due to the recent warm weather, although both quality and condition of the nuts in this crop were above average. Deliveries during December were mostly in the form of machine harvested blends.

MARKETING: The first significant grower price report on Georgia pecans was issued on October 19 when bids and subsequent purchases were noted on giftpack quality pecans destined to retail outlets. Prices again started at traditionally high levels of marketing, fueled by a short crop. Demand was very good on lots suitable for giftpack, fundraising uses and inshell uses and fairly good for supplies suitable only for commercial shelling use, primarily lots with high unit count or meat yield too low for others uses. Thru October, commercial shellers were only participating in the market on a limited basis as demand was fueled by the giftpack and fundraising sectors. As the harvest continued to accelerate in November, prices started to decline but remained at traditionally high levels. While demand continued to be good for lots suitable for giftpack, fundraising and inshell uses, commercial shelling demand was very light improving to light by the second week of the month. By the middle of November, demand was fairly light with prices generally lower as the giftpack and fundraising sectors had filled most of their immediate needs. In the latter half of the month, most lots were destined for commercial shelling use with prices for most varieties and grades slightly lower. With the harvest winding down after Thanksgiving, prices for the better grades of Improved varieties (that were still available) as well as for the better grades of machine harvested blends rose slightly. With the short crop and rapid harvest, thanks to mostly favorable weather, price reporting ended of December 21, although very light supplies were available into early January particularly in Middle Georgia.

Prices for relatively small crop of yard tree lots of Seedlings remained within a trading range of 70-90 cents per pound thru November 9 and then 70-85 cents per pound until price reporting on the variety ceased on November 21. Prices for yard tree lots of Stuarts of generally good quality sold in a range of 90 cents to \$1.25 mostly \$1.00-1.20 per pound for the season. In general, the Stuart crop was never as plentiful as expected prior to the season and yard tree nuts of Improved varieties were in a shorter supply during the 2006 season.

Lots of Desirables of good quality and larger volume (over 20,000 pounds) saw prices range between \$1.60-2.18 per pound over the season. Smaller (less than 20,000 pounds) lots of good quality brought between \$1.53-2.15 per pound over the course of the season. Stuart, for lots of good quality and larger volume, had prices range between \$1.43-1.92 per pound over the course of the season while smaller lots of good quality ranged between \$1.38-1.91 over the season. With both varieties, particularly Desirables, prices tended to decline over the course of the season.

Prices for machine harvested blends (lots containing a mixture of two or more varieties) of good quality in large lots (20,000 pounds or more) sold in a range of \$2.90-\$3.90 per point but mostly \$3.20-3.65 per point during the peak of the harvest. Smaller lots (less than 20,000 pounds) of good quality blends were available a little earlier in the season. Prices for these smaller lots were as high as \$4.00 per point near the start of the season to as low as \$2.90 per point around the Thanksgiving Day holiday after which prices rebounded. "Blends" were primary purchased on a meat yield-meat cost basis, dollars per percentage point of edible kernel.

MARKETING LOUISIANA PECANS - 2006 CROP

PRODUCTION: According to the Louisiana Agricultural Statistics Service, the 2006 Louisiana pecan crop totaled 21 million pounds, which is 16 million pounds more than the 2005 crop and 12 million pounds more than the 2004 pecan crop. Native pecans in 2006 comprised approximately 83.3 percent of the total compared with 80 percent in 2005 with Improved varieties comprising the remainder of the crop in each year. The average price received by producers for the 2006 crop was \$.983 per pound, compared to the 2005 average of \$1.15 per pound. The overall value of the 2006 crop totaled approximately 20.65 million dollars compared with the 2005 value of approximately 5.75 million dollars.

GROWING CONDITIONS AND HARVEST: The initial harvest of the Louisiana pecan crop took place in mid October in mostly the south and central areas of the state. Growing conditions from August until the harvest began were generally favorable with mostly dry weather and continued to be generally favorable for harvesting the majority of October and November. On November 13, the Louisiana Agricultural Statistics Service estimated the harvest at 49 percent completed and by December 4 the harvest was 78 percent completed. The remainder of the crop was harvested over the next seven weeks with harvesting very close to completed when price reporting ceased on January 18.

MARKETING: Price reporting for Native pecans began on November 9 with sales of yard tree lots (less than 1,000 pounds) of good quality paying growers 55 to 70 cents per pound. Prices in November rose as high as 85 cents per pound on November 28 before declining to 70 cents per pound on December 7. From December 14 through the last reporting date of January 18, prices were within a range of 80 to 95 cents per pound.

MARKETING OKLAHOMA PECANS - 2006 CROP

PRODUCTION: According to the Oklahoma Agricultural Statistics Service, Oklahoma's final 2006 pecan production totaled 17 million pounds as compared with 21 million pounds for 2005. The majority of the pecans produced were Natives and Seedlings.

GROWING CONDITIONS AND HARVEST: Weather conditions in Oklahoma were unfavorable during the growing season for the 2006 crop. Temperatures were hot and dry with large drought in most areas, leaving no sub-moisture for trees to make desirable nuts. Early harvested quality was fair with most lots showing a below average quality shell. Delivered quality of Natives and Seedling was consistent for the season ranging for reported lots between 40-42% meat yield. Reported lots of Stuarts were also in a range of 40-42% meat yield, which is however only fair for this variety. Scattered precipitation fell during the harvesting season, but overall the conditions were generally good to complete harvest in a timely fashion. Harvesting for this short crop began in early November in most areas of the state. Harvesting continued to be active into early December when winter storms entered the state. Fortunately, harvest was nearly completed at that time and was able to finish up in mid December.

MARKETING: The first grower price report for Oklahoma pecans was issued on November 16. Prices for lots (less than 5,000 pounds) for Seedlings and Natives varied slightly remaining in a range between 84 cents and \$1.01 per pound over the course of the season. Prices for similar sized lots of Stuarts of mostly fair quality varied slightly remaining in a range between about \$1.40-1.60 per pound over the course of the season. The last price report was issued on December 14.

MARKETING TEXAS PECANS – 2006 CROP NORTH, CENTRAL, SOUTHERN, and WESTERN AREAS

PRODUCTION: According to the Texas Agricultural Statistics Service, Texas's final 2006 pecan production totaled 47 million pounds, considerably less than the 2005 crop total of 65 million pounds, and slightly more than the 2004 crop total of 40 million pounds. Prices received by growers throughout the United States for 2006 averaged \$1.55 per pound, a significant increase over the \$1.45 average for 2005. Prices received by growers in Texas for 2006 pecans averaged \$1.60 per pound 13 cents higher than the \$1.47 average for 2005.

GROWING CONDITIONS: The 2006 season was expected to be short and it was. With the short crop of 2005 due to the drought, Texas producers were hoping for a better than average year. Then the drought continued. Drought hit Texas extremely hard. Most of Texas was without rain from February to September. Then the rains came, too much rain, just as harvest was starting. A lot of pecans were lost due to flooding.

HARVEST: Harvesting started in mid September. The drought conditions made the harvest very short. Then the wet orchards made it very difficult. The majority of the harvest was over by Thanksgiving, with only far West Texas running into December. The harvest was over by Christmas.

QUALITY: The 2006 production year produced a below average nut crop. The overall quality of the small crop was considered average. The West Texas crop was excellent bringing the quality and quantity up for the rest of the state.

MARKETING: The first price report of the 2006 pecan season was released on October 19, 2006. The final report was issued on December 14, 2006. Prices for Native/Seedlings and Improved varieties were again high in 2006. Demand was very good throughout the 2006 season due to the small crop. Prices early in the season for Natives in small volume lots ranged from 80 cents to \$1.01 per pound. Most of these lots were of only average quality, displaying 42% to 44% meat yield. The Native crop was very small due to the drought and heavy wildlife consumption. Prices remained steady throughout the season at mostly 96 to 97 cents per pound. Improved varieties traded at different levels based on variety and quality. The Cheyenne variety ranged from \$2.40 to \$2.50 per pound. The few Choctaws reported were harvested in early November and ranged from 80 cents to \$1.00 per pound. The Desirables reported started harvesting in early November and were finished by the end of the month with prices within a range of \$1.75 to \$2.40 per pound with most lots bringing over \$2.00 per pound. The Pawnee variety was the first harvested starting in mid September and finishing in early November. Reported prices ranged from \$2.25 to \$2.50 per pound. The Western Schley variety started harvesting in early December and finished in mid December. Prices ranged from \$1.60 to \$1.82 per pound. Buying interest remained high throughout the year for inshell and shelling purposes. Prices were historically high for the entire season. The short crops in Texas and other competing growing areas made for very high prices for a third year in a row.

MARKETING WESTERN IRRIGATED REGION (ARIZONA AND NEW MEXICO) PECANS - 2006 CROP

PRODUCTION: According to the New Mexico Agricultural Statistics Service, New Mexico's final 2006 pecan production totaled 46 million pounds as compared with 65 million pounds for 2005 and 39 million pounds for 2004. New Mexico accounted for approximately 22.3 percent of the nation's total production and approximately 30.4 percent of the nation's Improved variety production. This was slightly below the 23.2 percent of nation's total production accounted for in 2005 by New Mexico but slightly above the 28.4 percent of the nation's 2005 Improved variety production. Average price paid per pound to New Mexico's growers was \$1.85 as compared with \$1.70 per pound in 2005 and \$2.28 per pound in 2004. Value of production was estimated at \$85.1 million for 2006 below the \$110.5 million for 2005 and slightly below the approximate \$88.9 million in 2004.

According to the Arizona Agricultural Statistics Service, Arizona's final pecan production totaled 14 million pounds for 2006 compared with 22 million for 2005 and 14 million pounds for 2004. Arizona produced approximately 6.8 percent of the nation's total production and approximately 9.3 percent of the nation's Improved variety production in 2006. The percentage of the nation's total production was below 2005 when Arizona accounted for about 7.85 percent of the nation's production of all varieties. The percentage of the nation's Improved variety production was slightly less than the approximate 9.6 percent from 2005. Average price paid per pound to Arizona's growers was \$1.75 for 2006 above the \$1.60 averaged in 2005 and below the \$1.85 averaged in 2004. Value of production in 2006 was estimated at \$24.5 million as compared with \$35.2 million in 2005 and \$25.9 million in 2004.

GROWING CONDITIONS AND HARVEST: The weather over the growing season was variable with frequent rainfall late in the summer and average temperatures near or below normal. Scattered hail that fell in Southern New Mexico in late August and heavy winds in early November contributed to an early nut drop. In areas of early nut drop and low nut bearing trees, harvesting began in mid November earlier than normal and before the first hard freeze as moisture levels had dropped to acceptable levels. Due to the off-year crop size and good orchard management practices by growers, quality was very good. Delivered quality generally averaged 58 percent meat yield or better for large lots in excess of 20,000 pounds and 55 per cent meat yield or better for small lots less than 5,000 pounds. Harvesting generally began in mid November and was very active by late in the week of November 26 when low temperatures dipped into the lower 20s for several nights in the higher elevations and around freezing levels in the lower elevations allowing for tree defoliation, shuck split and moisture level reduction. Weather conditions for the season were generally favorable for harvesting with limited precipitation. Trade sources estimated harvesting to be 80-85 per cent complete by December 19 and 90-95 per cent complete by January 4. Harvesting was generally complete by January 18, earlier than normal. Growers early in the season were reluctant to market harvested supplies but rather accumulated supplies allowing nuts to dry to acceptable moisture levels. Many growers marketed their crop after the first of the year. A few growers utilized cold storage facilities in order to market their crop at a later time in the year.

MARKETING: Lots in excess of 20,000 pounds, mostly truckloads lots of 40,000 pounds, were sold on an inshell dollars per point basis, while smaller lots were generally sold inshell cents per pound or seller's choice. The Western Schley was the prevalent improved variety marketed. The first reported prices for truckload lots in excess of 20,000 pounds were on November 30 when lots of 55 percent or better meat yield quality were sold at \$3.05-3.15 per point, mostly \$3.05-3.10 per point. Prices rose by December 5 to \$3.10-3.15 per point and December 12 to \$3.10-3.20 per point, mostly \$3.15 per point. Slightly higher prices were reported December 19 at \$3.15-3.25 per point, mostly \$3.15-3.20 per point. Prices generally remained at \$3.15-3.20 per point for the balance of the season.

Prices for lots of 1000 pound to 5000 pounds were first reported December 14 when lots of 52 percent or better meat yield quality were sold at \$1.30-1.60 per pound. The market rose to \$1.40-1.65 per pound by January 11. Prices generally remained at that level for the balance of the season.

Prices for lots of 1000 pounds or less were first reported November 30 when lots of 52 percent or better meat yield quality were sold at \$1.20-1.40 per pound. The market rose slightly to \$1.20-1.50 per pound by December 5, remaining at that level until January 11 when prices rose to \$1.20-1.60 per pound. Prices generally remained at that level for the balance of the season.
